ABSTRACT

Evaluations of one-hundred seventy-two courses taught at Millard Fillmore College (SUNY, Buffalo) during the 1971-72 academic year are presented. Students enrolled in these courses provided the ratings. A standard format is used to present item by item responses of the students to the 43 questions in the survey form for each course. The first six questions provide a profile of the class in terms of such student data as years in college, cumulative grade point average, sex, class attendance, major reason for taking the course and age. Responses to the remaining items are given in terms of the number of students selecting each of five positions on a scale: strongly agree, agree, not sure, disagree, strongly disagree. Finally, mean scales scores for each of nine categories derived by pooling selected items (7 - 43) are given: profitable use of class time, supportive of students, course organization, grading and evaluation, ability to interact with class, oral presentation and mannerisms, knowledge of subject, availability of instructor, and overall student recommendation. The survey form used to collect the data presented in this report is included in the appendix. (RF)

ACKNOWLEDGMENTS

Project USOCAT has been supported by many individuals including members of the Millard Fillmore College Student Association (MFCSA) who provided leadership and financial support, and many students who gave unstintingly of their time and talents even though involved in full-time employment and the attendance of evening classes. We are indebted to:

Jack Bunting, President of MFCSA, who provided initial impetus and leadership for the 1972 survey and wisely appointed the Associate Project Director;

Henry R. Schenk, Associate Project Director, who supervised all Project staff members, worked out assignments and schedules, implemented the survey in an extraordinarily problem-free manner, obtained bids for printing, maintained liaison with the printer, and supervised distribution of the booklets;

D. Rudyard Merriam, Jr., Computer Programer, who supervised the keypunching and wrote the computer program for the information appearing on pages 1-174 of this book;

Alice A. Merta, who assisted the Associate Project Director, especially with quality controls;

Joann Radoccia, who did the keypunching; and

Francis W. Clarke	Mary A. Harris
June J. Crawford	Olga Krajnyak
Edith Duft	Bruce D. Wahl
Herbert W. Fischer	Eleanor E. Yax

Project members performed a variety of services, often pinch hitting for each other in running the Project office, telephoning faculty, preparing materials, sharpening pencils, and entering a classroom while observing certain protocols. All staff members attended training sessions conducted by the Project Director. Their attention and conscientiousness resulted in a smoothly performed survey and reliably obtained information.

Last but not least is the great encouragement and financial support offered by Dean Robert F. Berner, who has consistently supported MFCSA in joint efforts to provide optimum conditions for instruction.

RKR

FOREWORD

USOCAT 1971-1973, occurring as part of a national phenomenon in American higher education, has been an interesting perhaps useful exercise aimed at improving college-level instruction. Although definitions of "good instruction" vary, I suggest that if the "survey" route is used to ascertain whether good instruction exists, future survey tools must use a model that seeks to identify internal changes (in students) resulting from the educational process.

Traditional Model

There is little evidence of correlation between USOCAT-type categories--e.g., availability of instructor--and learning or other constructive change on the part of students. Perhaps the major accomplishment of USOCAT is that it provides a means of communication from students to faculty in a reasonably objective way. Of course, such communication is based on an information model that reflects the traditional stance of faculty in the educational delivery system. Thus, USOCAT and most of the systems used elsewhere in a campus-wide approach (e.g., the one developed by Professor Milton Hildebrand at UC--Davis) can be used effectively only in traditional-type classes. Even though USOCAT provides "Laboratory" or "Studio" options, this approach will not work in the situation involving two or more laboratory or studio instructors. In the case of any course requiring multiple instructors, traditional USOCAT-type instruments cannot be used. Data gained in this manner have unacceptable reliability.

Reliability

Lack of reliability can also result from other causes such as the method used to gather information. For a campus-wide survey anonymity of students must be preserved, a requirement strictly observed by the USOCAT staff. Students are extremely sensitive to the conditions of data gathering, and their negative perceptions of this critical step will render the data biased and useless.

USOCAT data are biased, but for a different and acceptable reason: participation in the survey is voluntary. This condition, resulting in self-selection of faculty into the survey, even so produces information useful to instructors and to students. Faculty may best use the USOCAT information to ascertain variations of mean scores between categories of instruction for a specific course. They are advised not to compare their scores with those of other instructors. Students benefit by having the opportunity to communicate their perceptions in an anonymous way

that can help to improve the mechanics of instruction. Also they may use the information to pick and choose their courses. Merely being included in the survey is some indication that the instructor's course will be attractive to students. Notwithstanding the bias from self-selection, I feel strongly that this manner of participation is the better way of involving faculty in the improvement of instruction. It has been extremely gratifying to receive telephone calls complaining about not being included in the survey. All such requests were honored.

Granted the assumption that USOCAT-type instruments are useful within certain constraints (e.g., one instructor per course), we must accept some probability that there is little relationship between the data so generated and prediction of learning on the part of students. In the case of courses structured in non-traditional ways, such instruments will fail dismally because they are structure-sensitive. What is needed is a structure-insensitive instrument not only to provide a more flexible tool that improves reliability, but also to provide a means for relating the events of the classroom to a process that enables improvement in learning or other constructive change in students.

Suggested Model

For the direction I am suggesting, we need data that inform us primarily about changes in students and secondarily about students' perceptions of their instructors. If desirable changes occur in students, and these changes can be related to a specific course, then ipso facto we have extremely valuable information that relates events in the classroom or instructional situation to changes in students evidenced outside the classroom. This possiblity may seem like a quantum jump, but I believe we can achieve it by designing a model incorporating a new focus and point of view that translate into appropriate taxonomic categories and respondent items.

Requirements for obtaining data of this kind include the design of a flexible evaluation instrument that is insensitive to course/class structure (whether student centered, instructor centered, or somewhere between). It must use major categories that get at changes in cognitive styles, both specific to a given course and general to matters of living. In the former case, I have in mind categories relating to convergent and divergent cognitive styles. In the latter case, I have in mind a category related to critical thinking abilities.[1] Still another category could relate to affective characteristics.

---

[1] R.R. Allen and R.K. Rott, The Nature of Critical Thinking, Theoretical Paper No. 20, Wisconsin Research and Development Center for Cognitive Learning, The University of Wisconsin-Madison, 1969.

Selected elements of USOCAT-type instruments might be retained. A global category together with subcategories on grading-evaluation, course organization, and instructor-student interaction would continue to be useful. However, the objectives accomplished by USOCAT-type instruments can (and might better) be accomplished by other means such as inservice training, elements of graduate programs directed to teaching in the disciplines, and surveys conducted by instructors for their own uses.

One major reason for conducting a campus-wide survey is to enable comparisons between and across academic divisions. Whether or not the information gained by typical surveys relates directly to institutional goals needs to be examined. I have little doubt that such information does relate directly to the mechanics of good teaching.

Summary History

When the USOCAT instrument was designed in 1971, there was no need to re-invent the wheel. Much research existed, and the final instrument was based primarily on a model using the critical incidents method to define major categories.[2] Information from similar work at the University of Michigan and SUNY-Binghamton was also used. Items were borrowed and modified. The Likert Scale was used.

Other design features include "face validity" ratings of items ranging from good to excellent, acceptable unidimensionality of the items and categories, conciseness of item statements, extra spacing between categories (page format), random ordering of categories, and random ordering of items within a category. In Part B almost two-thirds (7) of the negative items occur within the first 9 items. This arrangement may be regarded as an error in design. Although data gained from the 1971 survey was processed by means of the Statistical Program for Social Sciences (SPSS) over the course of 15 months, very little change was made in the original instrument for the purpose of conducting the 1972 survey.

Several faculty offered advice and help on the design of the USOCAT instrument. In particular, I would like to thank Dr. Raymond G. Hunt, Director of the Survey Research Center and Dr. Allen H. Kuntz, Director of Student Testing and Research. Opinions from other sources were also obtained, and sometimes these were conflicting--for example, on the question of the optimum number of items. With perhaps one exception, all decisions were mine, and whatever is good or bad about the instrument is my responsibility. For this step the Project

[2]Paul H. Owen, Some Dimensions of College Teaching:..., Ph.D. dissertation, University of Houston, 1967 (No. 67-7341, University Microfilms, Inc., Ann Arbor, Michigan).

Director's experience in designing tests of critical thinking at the Wisconsin R & D Center for Cognitive Learning was invaluable.[3]

Planning of the survey may be of some interest to students or faculty contemplating a similar venture. Plans dated August 7, 1972 were submitted by the Project Director to Dean Robert F. Berner and are on file in his office. Matters such as selection of survey dates, kinds of staff needed, functions to be performed, timing, supplies needed, even the need for sharpening pencils, and publicity are discussed. For this step, the Project Director's experience in planning and implementing a normative study in four communities and eight schools in the state of Wisconsin was invaluable.[4]

The best laid plans--to uncoin a phrase--will come to naught without the cooperation, dedication, and loyalty of the individuals involved in a project. I am most grateful to Dean Robert F. Berner, Mr. Jack Bunting, Mr. Henry R. Schenk, Mr. Rudd Merriam, and the many MFC students who worked very hard to carry out the survey. Many of the staff held full-time jobs and attended evening classes while doing the survey. Seldom have I had the privilege of working with so many who expected so little in return.

Robert K. Rott
Director, Project USOCAT
April 1973

STATE UNIVERSITY OF NEW YORK AT BUFFALO
Office of Evaluation

UNIVERSITY SURVEY OF COURSES AND TEACHING

The purpose of this survey is to help evaluate this course and the teaching performance of its instructor. Emphasis of the survey is on teaching, and results from it will be made available to both the instructor and to other appropriate authorized University bodies. Individual faculty members have the opportunity to use results of the survey to evaluate and improve courses and teaching. Various University decision-making bodies have a responsibility for carefully evaluating results of the survey to help them in arriving at judgments about courses and faculty at this University.

You will be provided an IBM answer sheet on which to record your answers. Do not write on the "questionnaire." Do NOT write your name on the answer sheet. You and your answers will remain ANONYMOUS inasmuch as it is essential that you respond candidly and truthfully if this "questionnaire" is to achieve its purpose.

INSTRUCTIONS

Write the name of the instructor and the course identification number (SARA NO.) on the answer sheet. Then, answer ALL items in Parts A and B. Answer Part C only if your course includes laboratory or studio work.

Note that item numbers on the IBM sheet progress from left to right. For the items in Parts B and C, there are five possible responses:

1 STRONGLY AGREE 2 AGREE 3 NOT SURE 4 DISAGREE 5 STRONGLY DISAGREE

Select one response for each item and record it by filling in the appropriate space on the answer sheet.

Do not be reluctant to use the "extreme" alternatives--the "end" response options of the five usually available--if you think they describe your viewpoint.

Sample Items

(1) The instructor's style of lecturing is interesting.
(2) He (or she) does not appear to be interested in the subject matter.
(3) The instructor prepares students to handle course problems.

In the examples, the responder STRONGLY AGREED with Item 1, STRONGLY DISAGREED with Item 2, and was NOT SURE about Item 3.

Before beginning Parts B and C, turn the page and complete Part A, Student Data. Thank you. Please begin.

PART A: STUDENT DATA

Select the number of the appropriate response to each item. Then, blacken the corresponding space on the IBM answer sheet next to the number of that item.

1. Your year in college:

   1) freshman (0-31 hours completed)
   2) sophomore (32-63 hours completed)
   3) junior (64-95 hours completed)
   4) senior (96 or more hours completed)
   5) other (Graduate student, not matriculated, etc.)

2. Your cumulative grade point average at SUNYAB:

   1) none (1st semester freshman or new transfer student)
   2) 0.0-1.9
   3) 2.0-2.4
   4) 2.5-2.9
   5) 3.0-4.0

3. Your sex:

   1) Female
   2) Male

4. Your lateness and absence from this course:

   1) never
   2) 1 or 2
   3) 3 or 4
   4) 5 or 6
   5) 7 or more

5. Your major reason for taking this course:

   1) required course
   2) reputation of instructor
   3) subject matter of interest
   4) easy course
   5) other

6. Your age:

   1) up to 19
   2) 20-25
   3) 26-30
   4) 31-40
   5) 40 or over

Thank you for your help. Now turn the page and begin Part B. Please remember that your candid and honest responses can help enhance the quality of courses and teaching at this University.

PART B: CLASS INSTRUCTION

In your responses to this section, do not consider work in laboratory or studio. To what extent is each of the following statements true or characteristic of the teacher or the class work? Indicate how true you believe each statement is by marking the space on the answer sheet that best describes how much you agree or disagree that the statement is true or characteristic of your class or teacher.

1 STRONGLY AGREE 2 AGREE 3 NOT SURE 4 DISAGREE 5 STRONGLY DISAGREE

7. Digressions by the instructor consume class time.
8. The instructor profitably uses spontaneous digressions from planned class work.
9. Class discussion strays from the topic of the day.
10. He (or she) belittles students.
11. Students are discouraged from asking questions.
12. The instructor makes me feel tense in class.
13. The instructor did not clarify course goals, aims, and objectives.
14. He (or she) has organized this course well.
15. Structure and direction for this course are not clear to me.
16. Assignments including readings have been well selected for this course.
17. Examinations are graded and returned promptly.
18. The instructor makes suggestions helpful in improving my work.
19. Criteria for evaluating students are specified.
20. The instructor criticizes my graded material constructively.
21. My papers and examinations are graded fairly.
22. Relevant issues are pointed out in the reading or other assignments.
23. The instructor does not provide clear explanations of difficult material.
24. The instructor is interested in students.
25. We were encouraged to participate in the clarification of course goals.
26. My interest in this course is stimulated by the instructor.

1 STRONGLY AGREE 2 AGREE 3 NOT SURE 4 DISAGREE 5 STRONGLY DISAGREE
*** *** ***

27. Material is related to social problems by the instructor when appropriate.

28. The instructor does not have a sense of humor.

29. He (or she) speaks with sufficient volume.

30. The instructor has annoying mannerisms.

31. He (or she) speaks clearly.

32. The instructor displays inadequate knowledge of the subject matter.

33. The instructor comes to class adequately prepared for the day's work.

34. He (or she) responds adequately to course-related questions.

35. The instructor is available for help outside of class.

36. The instructor is available at times other than specified office hours.

37. The instructor is available during specified office hours.

38. I learned a great deal in this course.

39. I would recommend this course because of the instructor.

Now, if your course includes laboratory or studio work, go on to Part C and complete items 40-43. If your course does not include such work, you are finished.

PART C: LABORATORY OR STUDIO INSTRUCTION

40. The laboratory (or studio) work helps me to understand major course concepts.

41. My laboratory (or studio) work is graded fairly.

42. Supplies or apparatus in the laboratory (or studio) are inadequate.

43. Laboratory (or studio) instruction is inadequate.

To: Faculty interested in USOCAT

From: Robert K. Rott, Director, Office of Evaluation

Subject: Interpretation of USOCAT Scores

It is suggested that category scores (means) obtained on the University Survey of Courses and Teaching (USOCAT) may be interpreted as follows:

Tentative Model: Scale of 1(high) to 5(low)

1.00--1.99: Master of instruction

2.00--2.75: Excellent to good instruction

2.76--3.50: Good to fair instruction

3.51--5.00: Fair to poor instruction

Note: Scores better than 1.25 or worse than 4.25 may indicate sample bias--e.g., sample too small. For improved validity, levels or ranges need to be established by means of normative data.

Based on a profile of USOCAT scores achieved by an instructor who has received public recognition for excellent teaching, and on review and discussion with the Faculty Senate Subcommittee on Teaching Evaluation (Allen H. Kuntz, Chairman), there is good empirical evidence that USOCAT has acceptable validity when used as recommended. It is recommended that the scores relating to any one course be compared only to each other. That is to say, comparisons between courses are not recommended.

Statistical analysis and normative data are needed in order to justify additional statements.

March 1972
